All in one SOLUTION for fine grinding and drying

First American Scientific Corporation (FASC) is an innovative equipment manufacturer and provider of turn-key systems that increase profitability and reduce the environmental impact of materials processing.

FASC's patented grinder-dryer KDS Micronex™ is an all-in-one solution for fine grinding and drying which efficiently and economically processes a wide variety of raw materials and wastes into fine, dry powders.

A major breakthrough in the Palm Oil Industry, is the effective disintegration of empty fruit bunch (EFB) into as small as 1 mm fibre particles and drying to a moisture content of below 10 %.

FASC's clients benefit by:

- Simplifying on-site grinding and drying operations into a single compact, and easy-to-operate system.
- Creating high-quality, dry, virtually pathogen-free powders that have value as industrial feed stocks, fuels, fertilizers and animal feeds.
- Reducing disposal and handling costs of and long-term liability from materials that were previously non-recyclable.

Key applications where the KDS Micronex™ has demonstrated advantages include:

Biomass waste into fuel and fertilizer (manure, paper sludge, bio solids, wood waste, Oil Palm waste and crop residues)

Soft rock minerals into fertilizers and industrial feed stocks (limestone, zeolite, phosphate rock, gypsum, and clay)

Agricultural and food waste processing into animal feeds (bread waste, seaweed, oyster shell, fish bones, and food processing waste)

Specialty applications (glass, metallic mineral ores)
